

Water Hygiene Awareness Training

Attain HSE compliance with regard to training and competence of responsible and operational personnel

The HSE ACoP L8 advises that those who are appointed to carry out the control measures and strategies are suitably informed, instructed and trained.

It states, they should be properly trained to standard which ensures that tasks are carried out in a safe, technically competent manner. Regular refresher training should be given and records of all initial and refresher training need to be maintained.

IWS offers a tailored service to inform, instruct and train at all levels of your organisation, which includes:

- Understanding management responsibilities
- Understanding the identification and assessment of the risk
- Preventing or controlling the risks
- Routine monitoring and inspection
- Record keeping

The training sessions help delegates to come to a valid decision about:

- The potential risks in operating their water systems
- Their responsibilities and the control measures required to eliminate or minimise those risks

All of our Legionella risk assessments are completed by City and Guilds qualified, competent and experienced professionals, in accordance with L8 HSG274, British Standard BS 8580 and UKAS ISO/IEC 17020:2012.

Monthly Public Health England Report

Public Health England provides a monthly report detailing the number of cases of confirmed Legionnaires disease. This helps to identify sources of infection so that control measures can be kept up to standard and improved on: <https://www.gov.uk/government/publications/legionnaires-disease-monthly-surveillance-reports-2019>

How can we help?

With national coverage from regionally based service centres across the country, IWS are a Legionella Control Association (LCA) registered services provider.

We offer professional consultancy and technical service support for the health and safety, hygiene and environmental management of water systems.
